1. MINCOME PAYMENTS SUMMARY FILE

1.1 Introduction

MINC2 contains 495 variables constructed from the payments data base of the MINCOME guaranteed annual income experiment. The file consists of a header record of 14 variables for each household, followed by 37 monthly records covering the months of December, 1974 to December, 1977 inclusive, each month (repeating the same) 13 variables. The MINCOME User Manual should be consulted for details on the experiment.

1.2 The Sample

Observations in the file are from three segments of the main data base as follows.

1. The Winnipeg Site
This site had eight different treatments (combinations of normal reduction rate and guarantee level) as well as a control group. Most of the observations in this file come from this site.
2. The Dauphin Site
This site had only one treatment group and also had an open enrollment feature whereby households could enroll at any time in the experiment.
3. The Rural Dispersed Sites
Households were enrolled from eight towns and their municipalities in Manitoba. This "site" had one treatment group and one control group.

This file contains households from the original sample only; households from the so-called supplementary sample are not included in this file. There are no farm households on file for any of the three segments. We can further divide the households in each segment into three family types as follows:

1. Double-Headed Households:
Both a male and a female head present at enrollment with or without any children.
2. Single-Headed Households:
Only one head present at enrollment, usually female, with one or more children.
3. Single Individuals:
Only one head present at enrollment with no children.

The following two-way table gives a summary of the sample size on file by segment and family type:

	<u>Winnipeg</u>	<u>Dauphin</u>	<u>Rural- Dispersed</u>	<u>Total</u>
Double-headed	476	336	134	946
Single-headed	206	107	55	368
Single Individuals	225	164	85	474
<hr/> TOTAL	<hr/> 907	<hr/> 607	<hr/> 174	<hr/> 1788

The households in this file do not comprise a random sample from each of the segments but rather they represent a multiphase sample of low-income households in that information from two surveys was used to select the households to be enrolled. The first survey, the screener, was short and aimed at capturing only family composition information and a crude measure of income. The screener was conducted in the latter part of 1973 and the information from this survey was used to eliminate those households which were ineligible, including:

1. Households with either head over 57 years of age as of September 1, 1974. In the Dauphin segment only, one of the heads could be over 57 years of age (but less than 63) if the other head was less than 57 years of age;
2. Households with an average 1972/1973 yearly income adjusted to a family of size 4, in excess of \$13,000 (\$9,000.00 for the Dauphin segment only);
3. Mentally incompetent households;
4. Households with a language barrier to answering in English;
5. Households with one or more heads in the armed forces;
6. Households with disabled adult members;
7. Members of a religious order;
8. Institutionalized households;
9. Employees of MINCOME Manitoba;

10. Households with more than 5 roommates living in the same dwelling.

The ineligibles noted above redefine the population of interest. A subset of the remaining screened households was administered a baseline interview in 1974.

Based on the information obtained from the baseline interview, a subset of the baseline households was selected and assigned to the control group or to one of the 8 treatment plans defined below.

The idea of a guaranteed annual income program is based on two related principles. First, a household is guaranteed that their annual income will be at least some specified amount (referred to as the guarantee level). Based on monthly reports of family income, a cheque is issued to bring the family up to the monthly guarantee level. Second, income earned over the basic guarantee level is taxed at a rate less than 100 per cent (referred to as the normal reduction rate or NRR). A particular combination of a guarantee level and normal reduction rate defines a treatment plan. The eight treatment plans chosen by MINCOME are shown in the following table (for a double-headed household with two children; other families had their guarantee level adjusted by their family size index):

		<u>Normal Reduction Rate</u>		
		35%	50%	75%
Guarantee level	\$3800	Plan 1	Plan 3	*
at time of	4800	Plan 2	Plan 4	Plan 7
enrollment	5800	na	Plan 5	Plan 8

Plan 9 = Control Group

*Plan 6 was collapsed into Plan 7 early in the experiment due to sample attrition from that plan.

In the Dauphin and rural-dispersed sites, there was only one treatment group, namely Plan 3 and the control group. For reasons of economy and efficiency, MINCOME used an optimal allocation model that stratified the sample and allocated the units in cells so as to reduce costs while maintaining acceptable levels of precision and a sufficient number of points in the most policy relevant sections of the design. This implied that the probability a household is assigned to a given treatment plan (or the control group) is determined by household characteristics; this has important implications for hypothesis testing. For a more detailed

summary of the sample allocation and relevant implications, the reader is referred to the MINCOME User Manual. A few more points should be made here:

1. Once enrolled in MINCOME (usually in December, 1974), the households were required to fill out an income reporting form (IRF) every month for 37 months (December 1974 to December 1977 inclusive); the information on these forms was used to determine the cheque amount to be sent to the household in the next month.
2. As a requirement for continuing eligibility in payments, the household was required to complete a lengthy (usually several hours) interview, referred to as a "periodic" interview. The data from the periodic interviews forms the MINCOME surveys data base.
3. The guarantee levels outlined in the last table are for a family size of four with two heads and two children less than 15 years of age. This was taken as the base family and guarantee levels for all households were adjusted (using the family size index discussed later) to this base family.
4. The yearly guarantee levels given in the last table were increased by a lump sum of \$600.00 for all 8 treatment plans on July 1, 1975 as well as indexed by a cost-of-living adjustment on January 1 of 1976 and 1977.
5. The actual number of households available at any month generally decreases with time due to the households moving, refusing to participate any further, etc.
6. In order to keep a family unit at the assigned normal reduction rate (35 per cent, 50 per cent or 75 per cent), MINCOME prepared all tax returns for families in the experiment and either paid or rebated taxes to Revenue Canada for the treatment groups only.
7. For more details on any aspect of MINCOME the reader is referred to the MINCOME User Manual.

1.3 The Variables - General Format

A variable is assigned the value of -1 if it is missing for a given month. This occurs if the household has not filed an income reporting form (IRF) for that month. Fields 19, 21-27 are in cents and therefore have an implied decimal. The structure of the data on file can be illustrated by the following diagram (for a total of $14 + (13 \times 37) = 495$ variables).

	Header	Month 1	Month 2	-----	Month 37
Family 1	Var. 1-14	Var. 15-27	Var. 15-27	-----	Var. 15-27
Family 2					
Family 3					

last family					

2. VARIABLES ON FILE

2.1 Variables in the Payment User Tape

2.1.1 Header Information:

<u>Field</u>	<u>SAS Name</u>	<u>Description</u>
1	H1	Current family number
2	H2	Winnipeg site dummy
3	H3	Dauphin site dummy
4	H4	Double-headed household dummy
5	H5	Single-headed household dummy
6	H6	Age of male head
7	H7	Age of female head
8	H8	Normal reduction rate
9	H9	Filer member number
10	H10	Enrollment date
11	H11	First IRF period
12	H12	Last IRF period
13	H13	Number of months missing from first to last IRF
14	H14	Number of gaps from first to last IRF

2.1.2 Monthly Information: (repeated 37 times)

Field	SAS Name	Description
15	FS1-FS37	Family size
16	AD1-AD37	Number of adults (excluding heads)
17	CH1-CH37	Number of children
18	FSI1-FSI37	Family size index (X100)
19	GL1-GL37	Guarantee level
20	AC1-AC37	Assignment cell
21	W1-W37	Wages
22	WA1-WA37	Wealth tax amount
23	NRR1-NRR37	Total NRR income
24	TRN1-TRN37	Total 100% income
25	LMC1-LMC37	Last month's carry-over
26	CMC1-CMC37	Current carry-over
27	PAY1-PAY37	Actual payment amount

Fields 15 to 27 are repeated for 37 consecutive months covering the period of December, 1974 to December, 1977 inclusive.

2.2 Detailed Description of Variables and Values

2.2.1 Header Variables:

1. Field # 1: Current Family Number
This is the current family number at enrollment.
2. Field # 2: Winnipeg Site Dummy
= 1 if household was enrolled in Winnipeg site
(i.e.: field 1 < 19,000)
= 0 otherwise
3. Field # 3: Dauphin Site Dummy
= 1 if household was enrolled in Dauphin site
(i.e.: 34,999 < field 1 < 40,000)
= 0 otherwise

Note that if both Field #2 and Field #3 are 0, household was enrolled in rural-dispersed sites.

4. Field # 4: Double-Headed Household Dummy
= 1 if both male and female heads
are present at first IRF

= 0 otherwise

5. Field # 5: Single-Headed Household Dummy
= 1 if field #4 = 0 and family size
is greater than 1
= 0 otherwise

Note that if both Field #4 and Field #5 are zero, household was a single individual.

6. Field # 6: Age of Male Head
Age of male head (if present) as of
January 1, 1975
7. Field # 7: Age of Female Head
Age of female head (if present) as of
January 1, 1975
8. Field # 8: Normal Reduction Rate
.0, .35, .5 or .75; these are the 4 possible rates
at which earned income above the guarantee level
was taxed by MINCOME; the actual value depends on
which treatment plan the household is assigned to.
9. Field # 9: Filer Member No.
The member no. of the member responsible for
submitting all required reports and receiving
payment on behalf of unit.
- 01 = male head of household
02 = female head of household
10-19 = adult son of 01 and/or 02
20-29 = adult daughter of 01 and/or 02
30-39 = parent of 01 and/or 02
40-49 = all mandatory adult members not
covered above
50-64 = minor son of 01 and/or 02
65-79 = minor daughter of 01 and/or 02
80-80 = all mandatory non-adult members
not covered above
10. Field #10: Enrollment Date
Number of days after November 1, 1974 that
the unit was enrolled.
11. Field #11: First IRF Period
This is the first month, after November, 1974,
for which an IRF was filed. This field takes
the value 1 to 37 (in theory) with December, 1974
being the value 1 and December, 1977 being the
value 37.
12. Field #12: Last IRF Period
This is the last month for which an IRF was

filed. In theory the value for this field may range from 1 to 37.

- 13. Field #13: Number of Months Missing From First to Last IRF
By definition, the value of this field on the summary tape is always 0.
- 14. Field #14: Number of Gaps From First to Last IRF
By definition, the value of this field on the summary tape is always 0.

2.2.2 Monthly Information:

- 15. Field #15: Family Size
Number in family
- 16. Field #16: Number of Adults (Excluding Heads)
An adult member must exceed eighteen years of age, or exceed 16 years of age and be married or living with one or more of his/her own children (at time of enrollment).
- 17. Field #17: Number of Children
No. of members less than 16 years old.
- 18. Field #18: Family Size Index (X100)
The family size index was used to adjust the guarantee level in order to provide a similar minimum standard of living to all family sizes and hence offer a "neutral" support structure which would not systematically discriminate against any family size. The family size index is a function of number of adults (excluding heads) as well as family size and takes on the value 1.0 for a family size 4 with two heads and two children, (the base family). The table of values follows:

Family Size Index Table

<u>Family Size</u>	<u>Number of Adults (Excluding Heads)</u>						
	<u>0</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>	<u>6</u>
1	.38						
2	.71	.71					
3	.88	.97	.97				
4	1.00	1.14	1.23	1.23			
5	1.10	1.26	1.40	1.49	1.49		
6	1.20	1.36	1.52	1.66	1.75	1.75	
7	1.30	1.46	1.62	1.78	1.92	2.01	2.01
8	1.40	1.56	1.72	1.88	2.04	2.18	2.27
9	1.45	1.61	1.77	1.93	2.09	2.23	2.32
10	1.50	1.66	1.82	1.98	2.14	2.28	2.37
11	1.55	1.71	1.87	2.03	2.19	2.33	2.42
12+	1.60	1.76	1.92	2.08	2.24	2.38	2.47

19. Field #19: Guarantee Level
 The guarantee level represents the monthly payment a family received if it has no other source of income or wealth. A household's guarantee level is obtained by multiplying its family size index by the guarantee level for the base family outlined earlier.

20. Field #20: Assignment Cell
 The assignment cell is assigned to the unit at enrollment. The first digit is the treatment plan assigned to the household and is represented below in terms of guarantee level (at time of enrollment) for a base family of Size 4 and normal reduction rate combinations.

- Plan 1 = (3800/.35)
- Plan 2 = (4800/.35)
- Plan 3 = (3800/.50)
- Plan 4 = (4800/.50)
- Plan 5 = (5800/.50)
- Plan 6 = (3800/.75)
- Plan 7 = (4800/.75)
- Plan 8 = (5800/.75)
- Plan 9 = Controls

The last 2 digits are the normal income cell of the household which determined the probability of being assigned to each of the 9 plans outlined above. (see User Manual for more information)

21. Field #21: Wages
 This is the sum of gross wages, as reported in that month, for all members of the household.

22. Field #22: Wealth Tax Amount
The net worth of a household equalled the difference between the market value of assets and the amount owing on the assets. A dwelling occupied as a principal residence by a household was excluded from net worth after 1975, although it was included for the 1975 calendar year. The effect of increasing net worth was to decrease the guarantee level of the household. This field is the dollar amount by which the guarantee was decreased because of the net worth of the household.

Wealth tax amount is calculated as follows:

1. first \$3,000 is exempt
2. 4% of next \$10,000 or portion present
3. 8% of next \$20,000 or portion present
4. 16% of amounts over \$33,000 if applicable

For more details, reader is referred to Technical Report No. 3, The Design of the Payments System of MINCOME Manitoba.

23. Field #23: Total NRR Income
This is the sum of all income which is taxed at the normal reduction rate (.35, .50 or .75 for treatment units) and included:

1. wages and salaries
2. tips and gratuities
3. disbursements from profit sharing plans
4. vacation and severance pay
5. almost all other income received from private sources
6. market value of rent free or subsidized housing provided by non-government sources
7. payments from pension plans, annuities and retirement benefits
8. alimony or child support received
9. strike pay or unemployment benefits
10. half of the income from boarders and one-third of the income received from roomers
11. training allowances, fellowships, scholarships and bursaries
12. workers compensation designed to cover the loss of income
13. war veterans pension

24. Field #24: Total 100% Income
This is the sum of all income which is taxed at the 100% rate and includes:

1. Unemployment Insurance Benefits

2. Canada Pension Plan benefits
3. Old Age Security benefits
4. War Veterans Allowances and Civilian War Allowances
5. Market value of income-in-kind of rent free and subsidized housing provided by a government source
6. WEALTH TAX AMOUNT (FIELD #22 ABOVE)

25. Field #25: Last Month's Carry-Over
Reported income above the breakeven level in any month was carried forward and counted as income in later periods, whenever income fell below breakeven. This field is the year-to-date accumulation of such unused income.

26. Field #26: Current Carry-Over
This is the amount of carryover after this month's payment

27. Field #27: Actual Payment Amount
The monthly payment (P) is calculated as follows:

$$P = G - T - t * Y + U + C + A$$

where: G = guarantee level (field #19)
T = total 100% income (field #24)
t = normal reduction rate (field #8)
Y = total NRR income (field #23)
U = allowance for statutory deductions
C = last month's carryover (field #25)
A = other adjustments such as late filing fee

3. ACCESSING THE PAYMENTS SUMMARY TAPE

3.1 Introduction

The payments user tape contains two versions of the same data. The first tape file contains a SAS Dataset version, the second, a fixed format file. Each file has 495 variables consisting of 14 header fields followed by 13 monthly fields for each of 37 months.

The tape is usually initialized at 6250 B.P.I. (although 800 and 1600 b.p.i are available) and is labelled MINC2. The dataset name for file 1 is PAYMENTS.SAS, while that for file 2 is PAYMENTS.DATA. In order to make use of the first file, an installation must have the statistical package SAS available. File 2 enables the user to access the data without requiring any specialized package.

3.2 The SAS Dataset

The dataset in the first file on the tape was constructed by SAS. It contains all the information about the data including the variable names and the data associated with them. This means no SAS 'INPUT' statement is required when accessing the data. The variables contained in file 1 are labelled as follows: the first 14 header variables: H1 to H14, the next 13 variables spanning month 1 (Dec. 1974) and are called FS1, AD1, CH1, FS11, GL1, AC1, W1, WA1, NRR1, TRN1, LMC1, CMC1, PAY1,, the last 13 variables are called FS37, AD37, CH37, FS137, GL37, AC37, W37, WA37, NRR37, TRN37, LMC37, CMC37, PAY37.

To access the SAS Data set the following JCL and SAS statements are used at the University of Manitoba. (There may be modification to these statements that are installation specific.)

```
//      JOBCARD
/*D1600  BIN#/MINC2
// EXEC SAS
//READ DD DSN=PAYMENTS.SAS,DISP=OLD,VOL=SER=MINC2,DCB=DEN=3,
//      LABEL=(1,SL),UNIT=D1600
//SYSIN DD *
DATA TEST;
      SET READ.PAYMENTS;
PROC PRINT;
```

This program should produce a print out of the 495 variables for all cases on file. The line 'SET READ.PAYMENTS' directs SAS to the location of the SAS data set in the JCL statement preceding it. Whereas READ is an arbitrary name, the second level name of the SET statement (PAYMENTS) was the name assigned at creation of the file on tape and should be used.

For a greater explanation of SAS datasets see the SAS User's Guides. This file should allow the user to do almost anything with the data, the only limitations being those of SAS itself.

3.3 Fixed Format File

In file 2 of the tape each variable occupies 8 columns. To move the fixed format file from tape to disk using the IBM utility, IEBGENER, the following JCL would be used at the University of Manitoba.

```
//      JOBCARD
/*D1600  BIN#/MINC2
// EXEC PGM=IEBGENER
//SYSIN DD DUMMY
```

```
//SYSOUT DD SYSPRINT=A
//SYSUT1 DD DSN=PAYMENTS.DATA,DISP=OLD,LABEL=(2,SL),VOL=SER=MING2,
// UNIT=D1600,DCB=DEN=3
//SYSUT2 DD DSN=NAME.DATA,DISP=(NEW,CATLG,DELETE),VOL=SER=DISK,
// UNIT=DISK,DCB=(LRECL=3960,BLKSIZE=7920,RECFM=FB),
// SPACE=(TRK,(250T,1),RLSE)
```

The file record length is fixed at 3960 and the blocksize is 7920. The variable "payment amount" for third month would start, for example, in column $(14 + 26 + 12) * 8 + 1 = 417$ and would end in column 424 where:

14 = 14 header fields skipped over

26 = first 2 months of data skipped over $(2 * 13)$

12 = first 12 fields of third month skipped over

The sum of these 3 nos. $(14 + 26 + 12 = 52)$ is multiplied by 8 because each field occupied 8 columns.

For further information, please contact Don Sabourin or Kerry Dangerfield at (204) 474-9118.
